

Preface

Step-Up Maths series is closely aligned to the direction set by MOE with the core aim of gauging the child's level of competency in conceptual knowledge and procedural strategies as required in mathematical problem solving.

There are three comprehensive sections in each topic:

A. Knowledge

Engage pupils in learning new concepts and skills in a progressive manner.

B. Comprehension

Reinforce the concepts learnt and deepen their understanding through school exam-style questions.

C. Application and Analysis

Stretch analytical skills, thinking skills and problem solving skills through more challenging tasks.

The child will build great confidence and achieve excellence in the subject through the practices in the books.
