

# Bar Graphs

## A. Bar Graphs

A **bar graph** visually represents information using bars, with each bar denoting a category or a number, and its length indicating its value. Bar graphs simplify the process of comparing and comprehending information.

The bar graph shows the survey results on the favourite canteen food among a group of students.

| Canteen food       | Fried rice | Nugget | Noodle | Toast |
|--------------------|------------|--------|--------|-------|
| Number of students | 52         | 24     | 36     | 48    |

The above information can be shown using a bar graph.
